Abstract. This article emphasizes the importance of mastering the English language and vocabulary with a professional orientation in the construction industry, which allows students to carry out their activities at the international level.

Keywords: vocabulary, professional English, construction specialty.

Introduction

Many construction companies carry out their activities at the international level, involving specialists from different countries. Learning industry-specific terminology and concepts is fundamental for construction students, enabling clear communication among professionals.

Research results

Regardless of whether you are talking to fellow builders, subordinates, management or the customer, your manner and language should be clear and professional. No matter how well and fluently you speak English in everyday life, you cannot do without professional vocabulary. Using business wording, you will be able to better: conduct negotiations at the design stage; explain to customers why this or that idea is worth or, on the contrary, impossible to implement in the project; work with customer requests and complaints; to take measures in case of force majeure situations; process information and submit requests for additional data necessary for work; introduce changes to the project at various stages of its implementation.

There are many architectural and construction terms. English vocabulary for builders can be divided into several categories: types of buildings; parts of buildings and their separate types; building and finishing materials; stages of finishing buildings. They include generally accepted basic concepts and terms that all specialists in the field of construction should know, regardless of their main profession.

It is quite difficult to learn construction tools in English, because there are quite a lot of them. But by enriching your vocabulary with professional English vocabulary for construction workers, you ensure a successful career.

Conclusion

In conclusion, it's always a good idea to learn the English language. The quality of the future construction depends on how well the specialist knows the terminology.
