INNOVATIONS IN ENGLISH INFLUENCED BY THE INTERNET

[1] Vinnytsia National Technical University

Анотація
В роботі розкрито тему інновацій у словниковому складі англійської мови під впливом мережі Інтернет.
Ключові слова: інновації, склад, мережа, Інтернет, словник.

Abstract
The article deals with the topic of innovations in the vocabulary of the English language influenced by the Internet.
Keywords: innovations, composition, network, Internet, dictionary.

Introduction

The Internet is a global information network that brings together millions of computers across the globe to share data and access information and technology resources. Today, more than 4 billion people use the Internet and this number is increasing every day. This network provides links to information networks of various institutions around the world.

Undoubtedly, the Internet has penetrated into all aspects of modern man's life as well as into his language. Through this network, hundreds of new words and phrases have been created and are now being heard from each person's mouth.

Research results

The advent of the Internet has led to the creation of a new social space - cyberspace or virtual - virtual space. A large number of words have been created to denote the concepts of economics that have been relevant only to the Internet. The creation of dot-com, dot-net, netcom, online company, Internet firm refers to "companies, firms that carry out their business activities only through the Internet". New words have been created for the new class of entrepreneurs ("cyber entrepreneurs - people who are engaged in online business only"): e-entrepreneur, entreprenerd, ontrepreneur .[1]

Lexical units cyber commerce, cybershopping, e-shopping, electronic commerce, internet shopping are used to indicate trade; cybercash, cybermoney, cybercurrency, E-cash, E-money, virtual money are used to introduce the concept of "electronic money"; cybermall, cyberplaza, cybershop, E-mall, electronic shop, E-partment, virtual store - for designation of electronic shops, malls. [1]

Many neologisms are formed by means of telescopy, that is, the foundation, because when communicating through computer. It is important to express thoughts quickly, so most words are shortened, while forming new words that are anchored in the language. For example, the word interamous consists of two words - internet and famous, from here and translation is known through the Internet. Another example is the word netvailable (internet + available), which is translated as accessible via Internet. [2]

Telescopy also creates neologisms that mark new ones types of entertainment, such as irritainment (irritation + entertainment), an annoying entertainment program, militainment (military + entertainment) - coverage of hostilities or military life on television as well movie genres such as romcom (romantic + comedy) - romantic comedy.

The conceptual system of "literature, art and sport" is also included in new words formed by telescopy. They are referred to as new concepts (xeroxlore (xerox + folklore) - a form of transmission and preservation of folklore, aquascape - a reflection of marine life by an artist who is located underwater) and existing ones, for example, amerasportsian - American who enjoys sports, fanfic (fantastic + fiction) - fantastic literature. [2]

This widespread using of the Internet and computers has given rise to a new type of distance learning where children can study not only in schools but also at home. A large number of universities have already switched to this form, but most of them are hesitant.

Conclusions

So, in recent decades, all aspects of human activity have been developing at an extremely rapid pace, but among them it is necessary to separate the sphere of information technologies. Various social media just confirms this. Prospective further work is to investigate the information factors that influence the development of vocabulary in English.
